# Agenda

<b>8:00</b>	<b>Welcome</b>	
<b>8:30</b>	<b>Introduction Overview</b>	<b>Martin Schaeffner – MTU</b>
<b>9:20</b>	<b>Industry Perspective</b>	<b>Dan Jacob- LNS</b>
<b>9:40</b>	<b>Manufacturer’s Perspective</b>	<b>Dele Awofala – Pratt &amp; Whitney</b>
<b>10:00</b>	<b>Engines Certification</b>	<b>Olivier Castets - Safran</b>
<b>10:15</b>	<b>Break &amp; Survey</b>	<b>Earl Capozzi – Pratt &amp; Whitney</b>
<b>10:30</b>	<b>Overview of AESQ Standards</b>	<b>Osa Omoruyi - Arconic</b>
<b>10:50</b>	<b>Market Place #1</b>	<b>Group- 00, 01A, 02, 03, 04 (15 minutes)</b>
<b>12:15</b>	<b>Lunch</b>	
<b>1:15</b>	<b>Benefits of the AESQ Standards</b>	<b>Helen – GKN, Bhu- PCC, Martin- MTU</b>
<b>1:45</b>	<b>Overview of DRAFT AESQ Standards</b>	<b>John Calder – Rolls Royce</b>
<b>2:15</b>	<b>Market Place #2</b>	<b>Group – 05, 06, 07, Future (15 minutes)</b>
<b>3:15</b>	<b>Break &amp; Quiz (pass out pens)</b>	<b>Catherine- SAFRAN</b>
<b>3:45</b>	<b>Market Place Summary</b>	<b>Dele Awofala – Pratt &amp; Whitney</b>
<b>4:15</b>	<b>Closing Remarks</b>	<b>Martin Schaeffner - MTU</b>
<b>4:30</b>	<b>End of Day</b>	

# Facilitators in the room

**ARCONIC**

GE  
Aviation

**GKN AEROSPACE**

**Honeywell**

**Pratt & Whitney**

A United Technologies Company

**Rolls-Royce**

**SAFRAN**

# PROTOCOLS

# Code of Conduct

Audio/video recording of meetings is not permitted

No Commercialism

No discussion of cost, pricing plans, pricing policies, product usage surveys, marketing plans or any related topics

Presentations must focus on technical issues (not on marketing aspects of products) and relate to or support the development or maintenance of G-22 Committee work

Be aware of and follow ITAR & EAR rules and regulations governing export control

Discussions should be open and follow the agenda or other legitimate direction agreed upon by consensus of the committee - avoid unauthorized or 'private' meetings

# Code of Conduct

Respect basic meeting etiquette:

Only one person speaking at any given time

Attack the issue, not the person

Be on time...returning from breaks/lunch

Respect all ideas & comments

No silent skepticism, be candid

Do not dominate discussions

Stay focused on the meeting & agenda

Strive for high-quality standards to benefit all stakeholders – users, customers, suppliers and the industry as a whole

Strive for an open atmosphere that promotes a free-flowing interchange of standards technical information

# OVERVIEW

# Commercial aviation – a growth market

In 2036

4.5%/yr Increase in  
Passenger Traffic

2 X active aircraft  
worldwide

=

**7,100 billion passenger km in 2016**

**17,000 billion passenger km in 2036**

**23,000 active aircraft in 2016**

**45,000 active aircraft in 2036**

Quelle: Ascend, IATA, MTU

# Aviation Safety

The Quality of our products and services are extremely important  
**Quality and continuous improvement are an absolute must! [Link](#)**

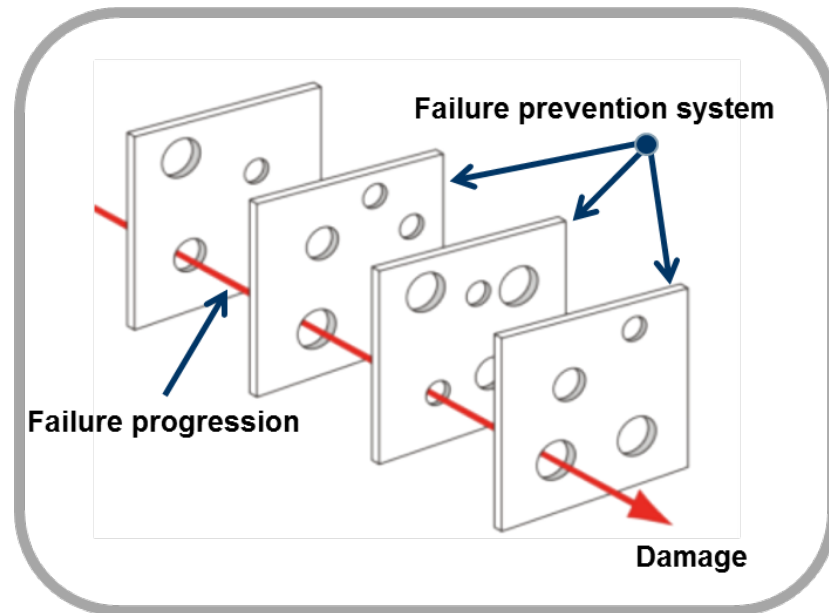

# Chain of events

In many cases, it is not a single malfunction, error or failure that leads to a crash.

It is a **sequence of events** involving

- hidden (latent) failures
- errors of judgment/action
- a failure of the failure

**“To establish and maintain a common set of Quality Standards that enable the Global Aerospace Engine Supply Chain to be truly competitive through lean, capable processes and a culture of Continuous Improvement.”**

## **In Detail:**

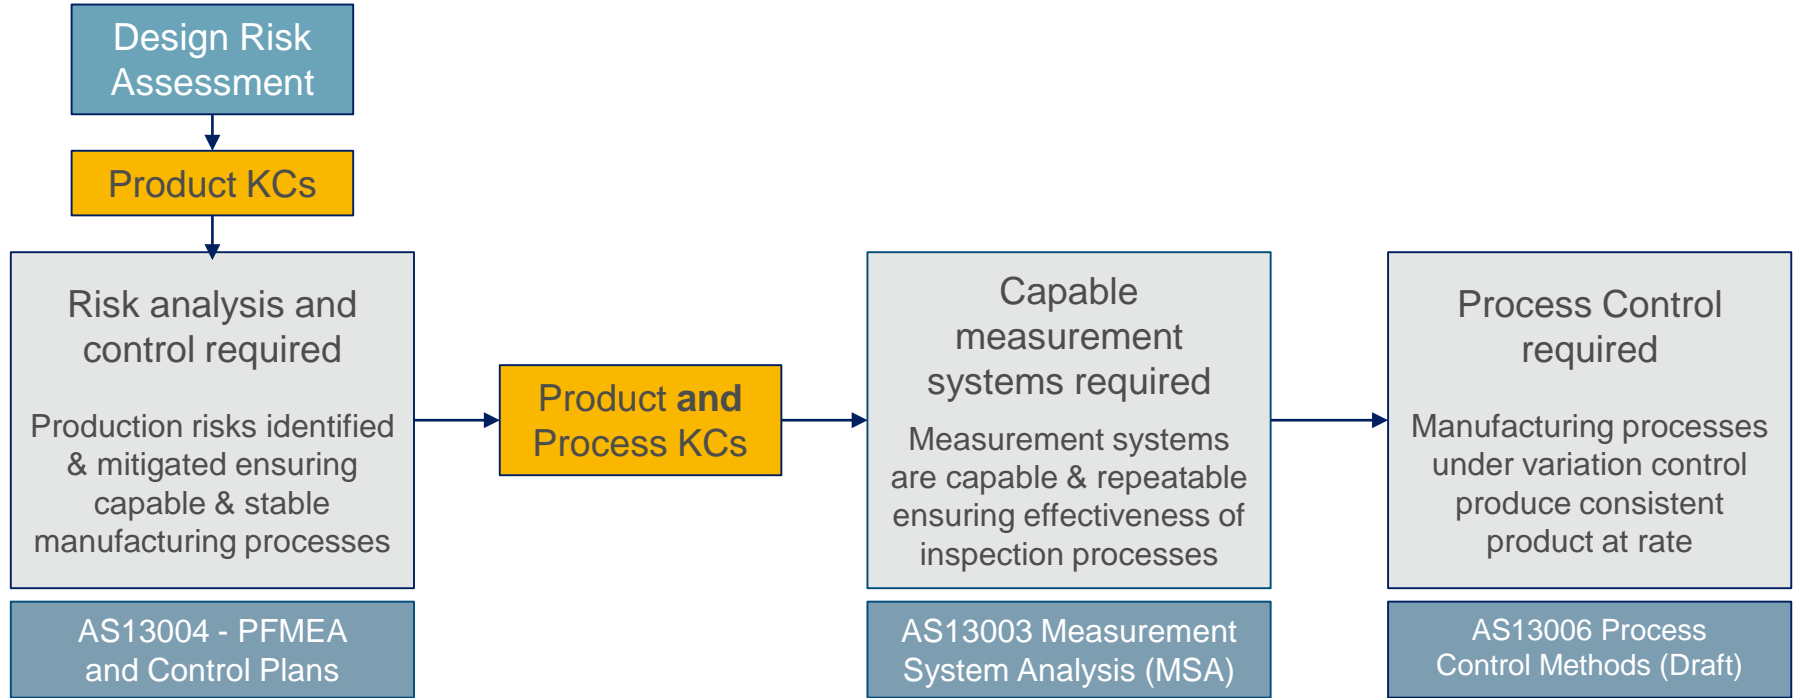

- create common quality standards for engine manufacturers & their supply chains
- deploy together the written standards throughout our supply chains
- establish capable quality processes and a culture of continuous improvement

## **Main Targets:**

- to improve quality within the supply chain
- improve on time delivery and minimize costs through a reliable quality performance
- gain efficiency by standardized processes

# AESQ Key Quality Elements

→ Aligned to AS9146 APQP & PPAP

**Supporting Standards: AS13000 Problem Solving; AS13001 DPRV Training; AS13002 Inspection Frequency; In process → AS13005 Audit; AS13007 Supplier Management**

**AESQ – Aerospace Engine Supplier Quality Strategy Group**

This document slide does not contain ITAR or EAR technical data. The content of this presentation slide is proprietary and confidential information of the AESQ. It is not permitted to be distributed to any third party without the written consent of the AESQ.

# AESQ will drive progress

- AS13000 & AS13001 & AS13002 & AS13003 are all contractually flowed down by all AESQ members and part of **your** purchase Order
- AS13004 & AS13006 will follow shortly

# How did you do?

**Discuss on your tables how effective is 100% inspection**

**Would 200% be better?**

**What can we do as part of defect prevention?**

**Prepare for feedback**

# Focus on Defect Prevention

**Defect Prevention**

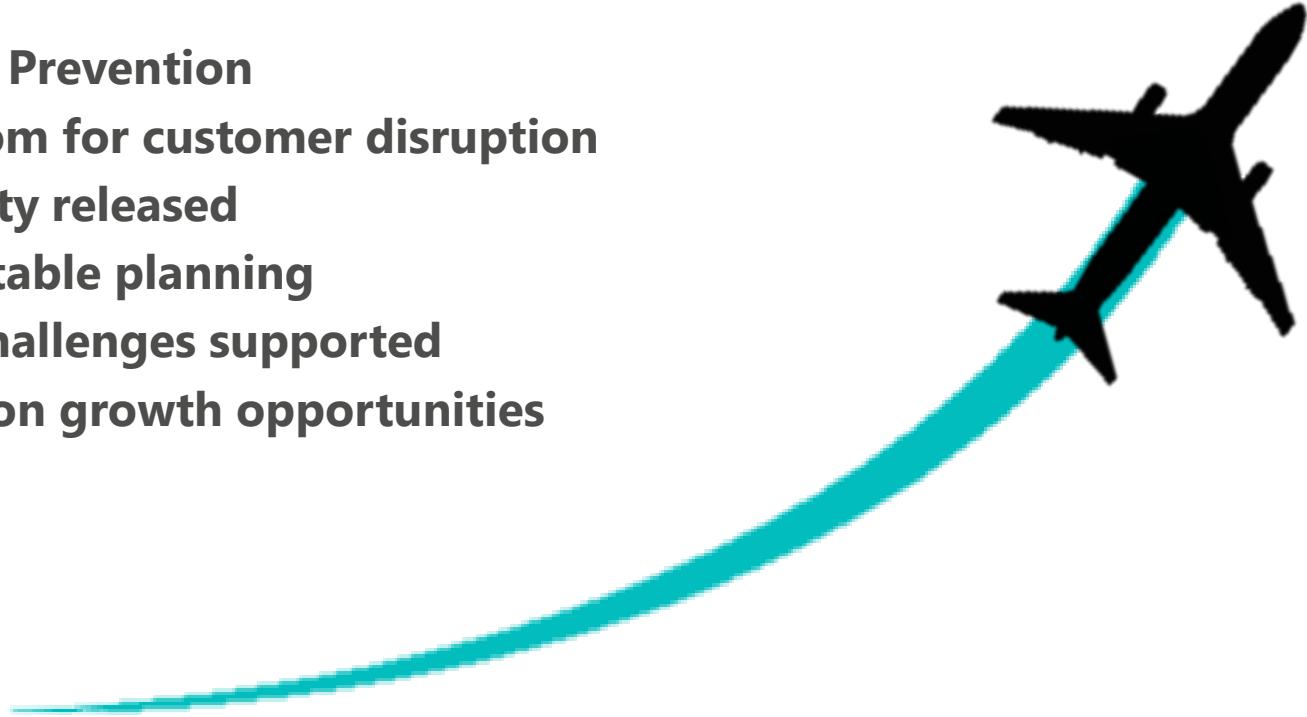

**No room for customer disruption**

**Capacity released**

**Predictable planning**

**Cost challenges supported**

**Focus on growth opportunities**

# MANUFACTURER'S PERSPECTIVE

**DELE AWOVALA**  
**PRATT & WHITNEY**  
**SR. DIRECTOR – SUPPLIER QUALITY**

# MEETING CUSTOMER EXPECTATIONS

**Drive and sustain superior value and a perfect customer experience**

What we are committed to

**PERFECT PRODUCTS**

Living up to the dependable engine promise

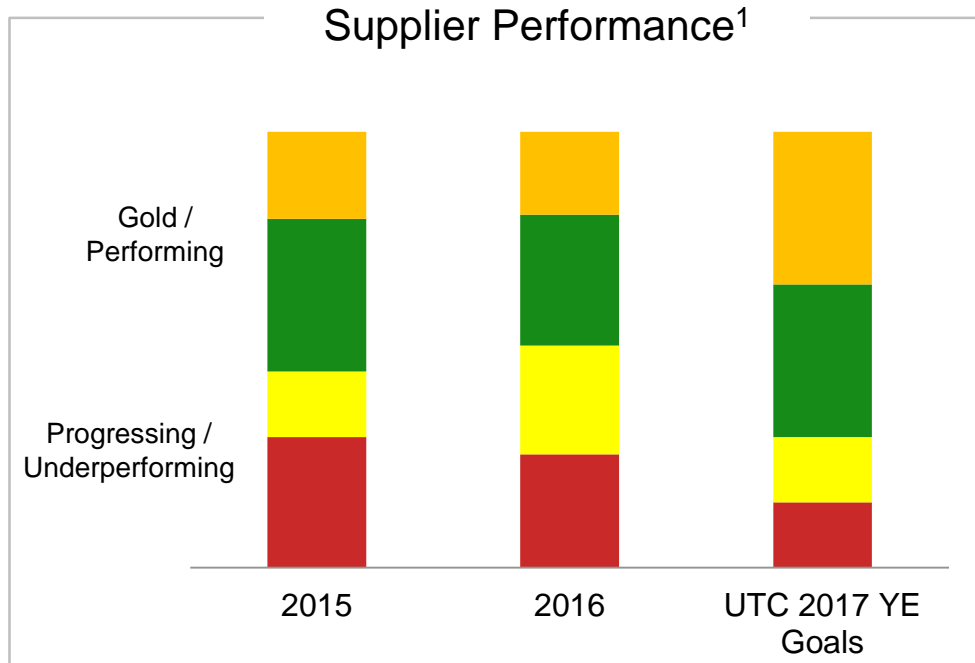

**PERFECT SUPPORT**

Perfect quality in all its forms

**PERFECT EXPERIENCE**

“Everything you need,  
More than you expect”

## 2020 Goal:

- 50/50 Gold & Performing

## Quality Enablers:

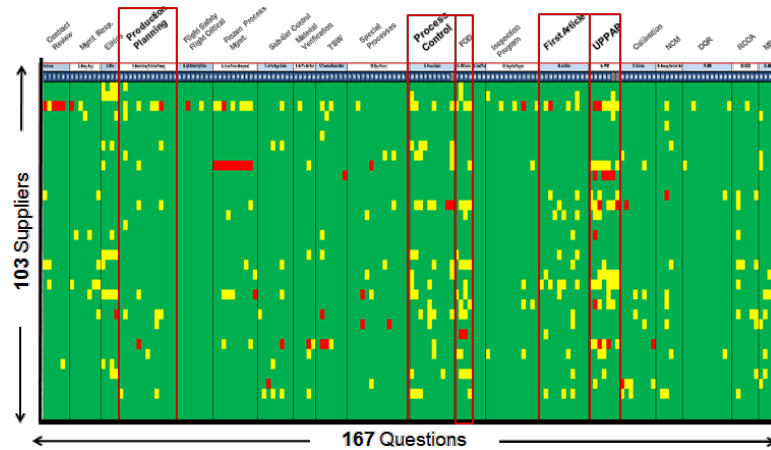

- Advanced Product Quality Planning (APQP)
- PPAP (Process Capability)
- PFMEA (Risk Reduction)
- Process Control \ Key Product Characteristics

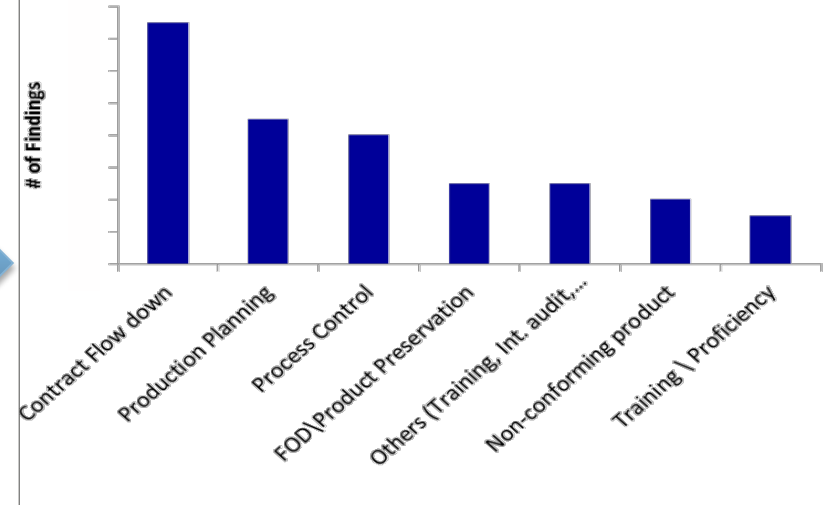

# SUPPLY CHAIN OPPORTUNITIES

Common drivers identified

## Supplier Assessment Questionnaire

## Supplier Audit Findings

Contract Flow down....Production Planning.....PPAP.....Process Control

## Advanced Product Quality Planning (APQP)

## Deploy Effective PPAP

## Drive PFMEA Process

## Leverage Process Control / KCs

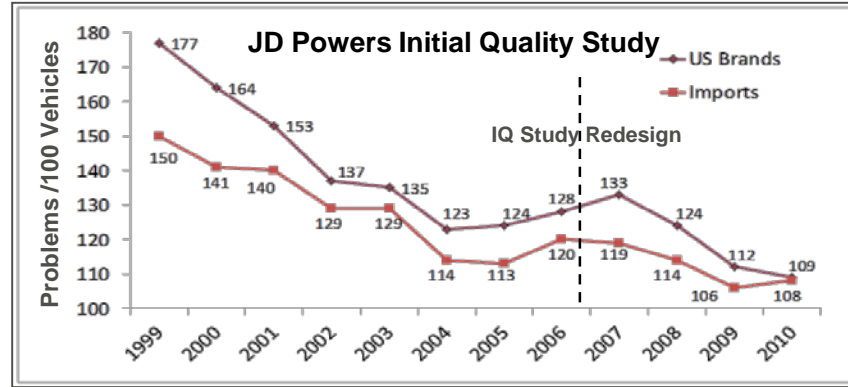

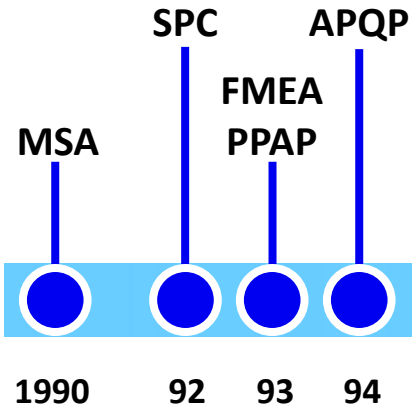

Proactive tools to deliver to customer expectations

# APQP/PPAP PROCESS

Aligns with Aerospace Standard AS9145

Automotive “Bluebooks”  
APQP/PPAP timeline

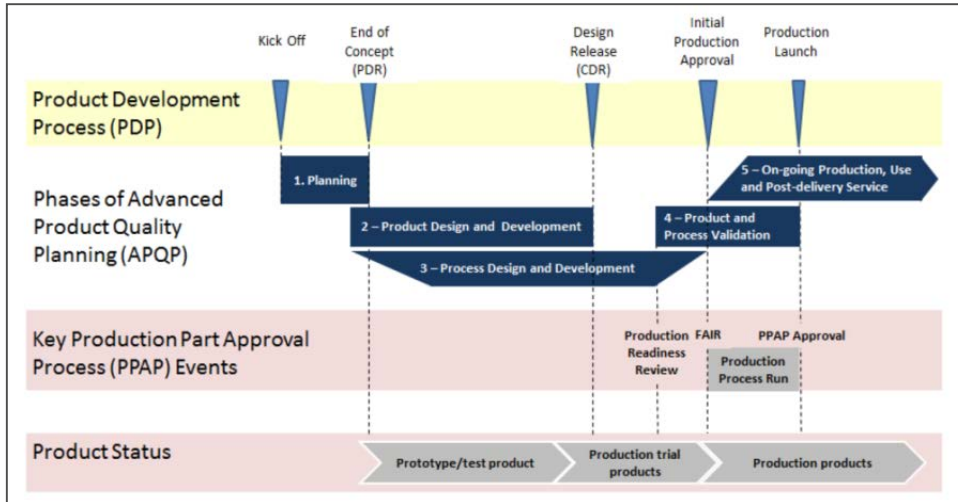

Aerospace APQP/PPAP timeline

Using automotive processes as a benchmark for quality enhancement

# APQP/PPAP PROCESS AND BENEFITS

Reduced process variation

Short lead time to achieve rate

Increased yield

Reduced cost of poor quality

Better control of process changes

Standard PPAP package to demonstrate process control & capability

Working upstream to prevent issues later in production

# PFMEA – IDENTIFY AND ELIMINATE RISKS

Focus on high risk operational steps to reduce risk of manufacturing error

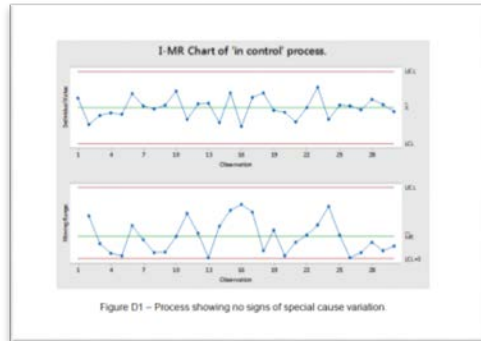

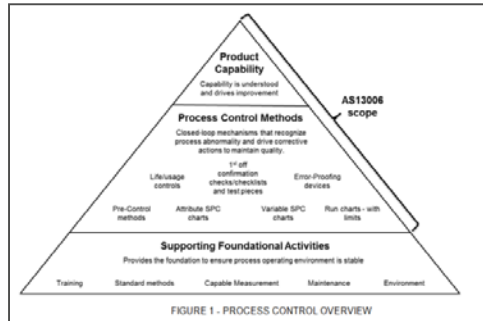

**CASE STUDY - FUEL AIR BRACKET PFMEA**

The PFD is used to develop the PFMEA. The PFMEA evaluates each of the process steps and the effects of different nonconformances that can be created.

Process Step		Failure Mode		Failure Effect		Failure Cause		Control Plan		Risk Score	
1	...	...	...	...	...	...	...	...	...	...	...
2	...	...	...	...	...	...	...	...	...	...	...

Drive PFMEA Using AS13004 - Process Failure Mode and Effects Analysis (PFMEA) and Control Plans

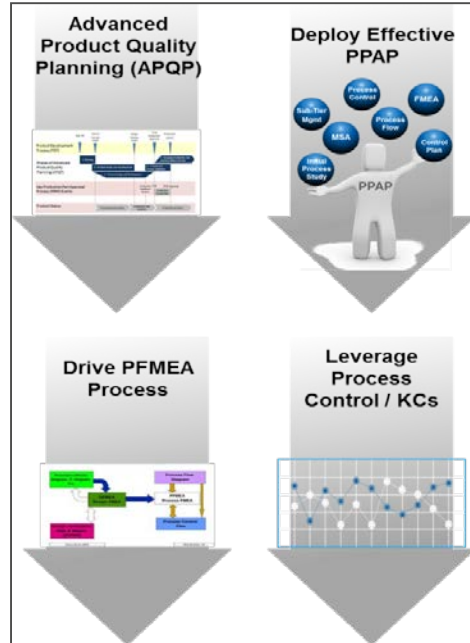

Better variation control & reduction

Enables fast response to process drift

Common standard aligned with AS9103, AS9145, AIAG “Blue Books” and AS13004 Process Risk Mitigation

Improved Quality Performance of Supplier selected KC’s and Customer KC’s

The benefits far outweigh the consequences of the current state

Customers expect a PERFECT EXPERIENCE

Quality must ENABLE and not inhibit

Focus on PROACTIVE tools. Not “check in the box”

Increase quality organization PROFICIENCY

Leverage AESQ Procedures and Standards

Our common objective should be to achieve PERFECT QUALITY

# ENGINE CERTIFICATION

**SAFETY**  
is the main purpose of the  
airworthiness regulations

In official language, “**safety**”  
has a very precise  
meaning.

It concerns:

The **SAFETY** OF PERSONS  
TRANSPORTED.

The **SAFETY** OF PERSONS  
OVERFLOWN.

# CERTIFICATION

**CERTIFICATION covers the actions requested to the designer of an aeronautical product (aircraft, engine and propellers) that are used to demonstrate to the certifying authority (EASA\*/FAA\*\*) the safety level required for the product.**

- This demonstration includes testing of the parts, components, systems or engines, along with analyses and descriptions.

**Scope of the DESIGN CERTIFICATION, in order to establish and maintain the fleet's safety level.**

- Certification of the definition (Type Design), including after-sales documentation.
- Modifications to the Certified Definition (Definition Modifications).
- Airworthiness monitoring in service.

# Airworthiness: safety is non-negotiable

**Absolute prerequisite for air transport.**

**Air transport activities will double in 30 years, and safety has to be maintained accordingly or improved when possible.**

**Society is increasingly sensitive to risks...creates more pressure around safety considerations.**

**An extremely robust airworthiness regulatory structure, coordinated with industry and enforced by official agencies.**

# Summary/conclusions

**SAFETY is the overriding goal of the certification requirements, with clearly defined levels to be respected**

**CERTIFICATION deliverables are: approved Type Design definition and Continued Airworthiness documentation.**

**The approved Type Design definition must be controlled through a Configuration Control Management, which is also approved.**

**Arrangements must be set up between the Designer and the Manufacturers in order to issue Individual Airworthiness Certificates.**

# What are the implications for us?

PPAP ensures that each part is compliant with certificated part;

Development

Certif

mass production

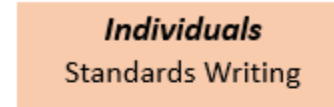

Process control  
PFMEA  
Change management  
Traceability  
NC management  
...

# Existing and Future Workstreams

# AS13000 Problem Solving

## Original State

## Current State

GLOBAL 8D

### AESQ Principles

- Standardise
- Simplify
- Adopts Existing Industry Standards
- Prescriptive, Auditable
- Common Language
- Supported by 3<sup>rd</sup> Party Training & Consultancy

### Expected Benefits

- Reduced need for Customer training & support
- Improved access to training & consultancy
- Removal of complexity of reporting
- Improved problem solving skills

# AS13001 DPRV Training

## Original State

## Current State

- One Common Training Requirement
- Industry wide DPRV database through SAE
- Delivered by SAE Globally
- Training every 3 years

## AESQ Principles

- Standardise
- Simplify
- Adopts Existing Industry Standards\*
- Prescriptive, Auditable
- Common Language
- Supported by 3<sup>rd</sup> Party Training & Consultancy

## Expected Benefits

- Reduced costs for the supplier
- Reduced training time for DQR
- Training provided in Supplier's region
- Customer training limited to on-site

\* Rev A is align with AS9117 - DPRV

# AS13002 Inspection Frequency

Original State

100% Inspection

REDUCED Sample

Error Proof **AQL**

Current State

100%

- Common Method for Inspection Planning
- Guidance on commodity specific planning

## AESQ Principles

- Standardise
- Simplify
- Adopts Existing Industry Standards
- Prescriptive, Auditable
- Common Language
- Supported by 3<sup>rd</sup> Party Training & Consultancy

## Expected Benefits

- Standardised Process
- Improved compliance
- Improved Product Quality

# AS13003 Measurement System Analysis

## Original State

## Current State

Method	Feature Category			
	Critical	Major		
Resolution	≤10% of total tolerance			
Accuracy ratio**	Requirement = 10:1			
Accuracy Error / Bias	≤10% of total tolerance			
Repeatability	≤10% of total tolerance	≤20% of total tolerance		
Gauge R&R	≤10% of total tolerance	≤20% of total tolerance	≤30% of total tolerance*	Purchaser requirements may override this
Computer driven measurement systems correlation	≤10% of total Tolerance		≤20% of total Tolerance	Purchaser requirements may override this
Linearity**	≤1% of total tolerance		-	
Attribute Study: pass/fail	Kappa > 0.8	-	-	Only required on operator dependent interpretation
Attribute study: ordinal	ICC > 0.75	-	-	Only required on operator dependent interpretation

## AESQ Principles

- Standardise
- Simplify
- Adopts Existing Industry Standards
- Prescriptive, Auditable
- Common Language
- Supported by 3<sup>rd</sup> Party Training & Consultancy

## Expected Benefits

- Improved knowledge of Measurement Capability
- Clarification of minimum acceptance standards
- Mandates replaces guidance
- Adopts Automotive Industry Action Group 'Blue Book' on MSA
- Improved Quality Performance

## Original State

Varying standards and approaches

## Future State

**In Scope:** Risk Mitigation requirements with execution guidance & recommended timing, supporting AS9145

**Out of Scope:** DFMEA requirements, any duplication of related Aerospace Standards (e.g. AS9145)

### AESQ Principles

- Standardise
- Simplify
- Adopts Existing Industry Standards
- Prescriptive, Auditable
- Common Language
- Supported by 3<sup>rd</sup> Party Training & Consultancy

### Expected Benefits

- Standardised process
- Increased pace of adoption
- Improved compliance to a better standard
- Reduced quality risks
- Ultimately improved quality & delivery

# AESQ Standards – Global Deployment

## Vision

Deploy harmonically  
 Challenge each other  
 Common language for Quality  
 Easy adoption of standards  
 Simplify requirements

**AESQ Standards - Global Deployment Status**

G22 – Aero Engine Supplier Quality

### Introduction to the Aero Engine Supplier Quality Group

**Purpose**  
We consistently get feedback from our suppliers that our requirements are different to that of our competitors (their other customers). Indeed it is often used as an explanation of why our costs are higher than those of our competitors. We also know that each of our competitors have unique requirements that often have similar intent but different approach or terminology, adding unnecessary complexity into our shared supply chain.

Therefore in 2012 we began a dialogue with GE, Snecma and Pratt & Whitney to see if there was interest in creating a harmonised set of standards for our shared supply chain. This led to the formation of a Technical Committee aligned under the SAE to develop common Aero Engine Supply Chain standards that each company would adopt. This Technical Steering Committee is made up of the following voting members, of which Rolls-Royce is the current Chair:

Participation in the Committee activities is open, and encouraged, to any Aero Engine Supplier through the G22 working groups.

**AESQ Principles**

- a) Harmonise the current set of requirements with a goal of creating a single standard
- b) Removes waste, such as redundancy and duplication and therefore lowers cost
- c) Provides a common language for Quality
- d) Adopts existing industry standards where appropriate
- e) Recognises third party support (training and consultancy)
- f) Develops the capability of the shared supply chain

Principles will be set through dialogue with our shared supply chain and needs of the business and we will move at pace to make a noticeable difference within the industry.

**What's different between the IAQG and AESQ?**

The IAQG serves the whole of the aerospace industry and therefore its working groups tend to work on "higher level" standards and guidance documents that accommodate the wide range of complexities it represents.

The AESQ's shared supplier base has many similar attributes and therefore it is much easier to be more focused and prescriptive than the IAQG.

The AESQ is engaged with the IAQG working groups and will participate and adopt IAQG standards where they meet the principles of the AESQ stated above. From the work we have done so far the AESQ standards are complementary to the applicable IAQG guidance material.

**AESQ is now well established and is gathering momentum**

**Supplier feedback is very positive & they want us to move faster**

**Broader supplier engagement is being sought to apply more resources**

**Stronger links with IAQG & PRI are being developed**

**Stakeholder engagement essential for progress & direction**

# SURVEY

# Survey Overview

## Collaboration

- Working together to drive quality performance

## Feedback

- Provide input on developing standards

## Integrated Supply Chain

- Drive efficiency, maximize resources, create synergies

## Training

- Coordinated training efforts

# Are you aware of the Published Standards?

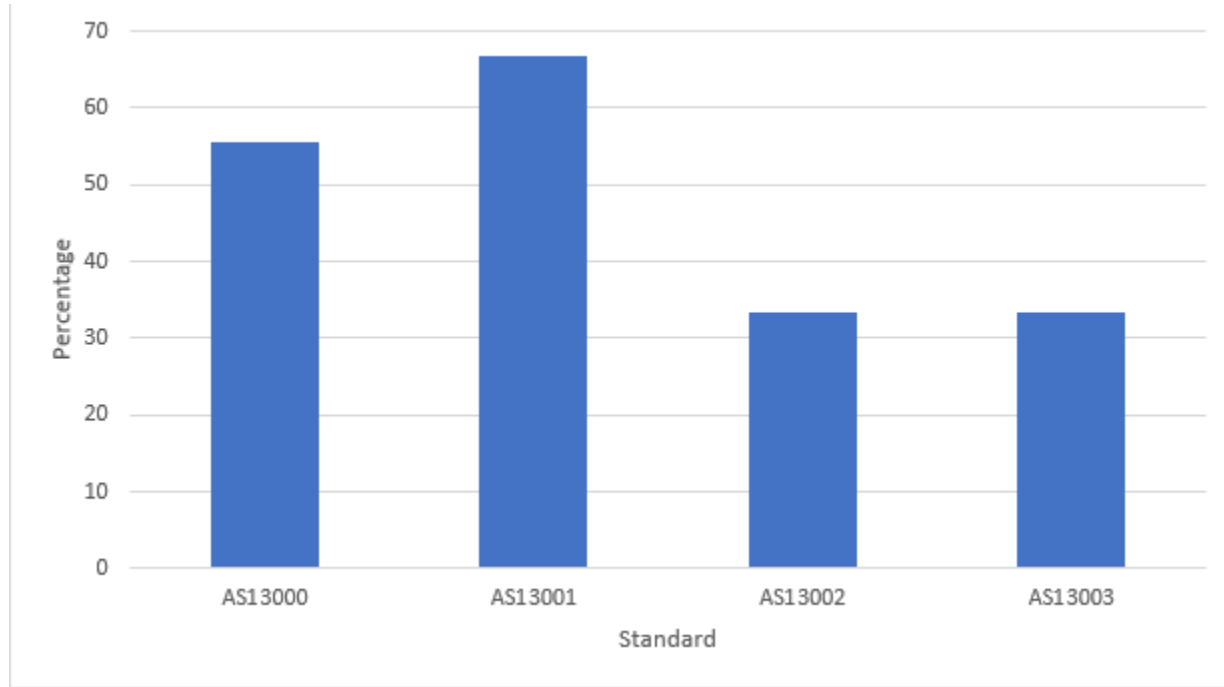

**We still have some work to do**

# Which Standards have you heard of?

AS13000 Problem Solving

AS13003 Measurement Systems Analysis  
AS13004 PFMEA & Control Plans  
AS13005 Internal & Supplier Audits  
AS13006 Process Control  
AS13007 Supplier Management

# Which Standards are in YOUR Contracts?

# MARKET PLACE #1

# Market Place #1

15 minutes per table

For the published standards (5 Tables)

- 13000
- 13001
- 13002
- 13003
- 13004

# Market Place #1 Questions

1. Has the Standard been flowed down by your Customer(s)?
2. Do you have any problems with or suggestions for the Standard?
3. Have you had problems flowing down the Standard to your suppliers?
4. Are there any commodity specific considerations?

# LUNCH

# BEGIN AGAIN AT 1:15PM

# BENEFITS OF THE STANDARDS & SUPPLIER CONTRIBUTIONS TO AESQ

# AS13000 – 8D PROBLEM SOLVING REQUIREMENTS FOR SUPPLIERS

**HELEN DJAKNEGREN - GKN**

# AS13000 – 8D How is the Standard being used?

## PCC

- Utilized for Root Cause Corrective Action
- Incorporated with Zero Defect Program for UTAS
- Assimilated with Innovator

## MTU

- 8-D method existed for years
- Web-based IT tool in use
- Find and eliminate the “real” root cause

## GKN

- Implemented in QMS and flowed to suppliers
- Utilized in internal and external Root Cause Corrective Action

# AS13000 – 8D How is the Standard beneficial?

## PCC

- Useful for addressing systemic issues
- Can be read-across for part families
- Increased effectiveness of problem-solving due to standardization

## MTU

- Easy to convince suppliers
- Ease of training at suppliers leading to better quality
- Increased efficiency in close-looping RCCA

## GKN

- Great problem solving method rather than just a reporting tool
- Prevented shortcuts
- Good training tool for personnel

[Supplier Development Engineer VideoVideos\AS 13000 Problem Solving.m4v](#)

# AS13001 DPRV

**BHU KENJALE - PCC**

# AS13001 – DPRV / DSQR How is the Standard being used?

## PCC

- Standardized training for self-release of product
- Cross-functional teams can benefit from this training

## MTU

- Implemented within MTU with high sense of urgency
- Suppliers requested implementation

## GKN

- Implemented customer release agents at GKN sites
- Implemented at suppliers for release agents

# AS13001 - How is the Standard beneficial?

## PCC

- Eliminated duplication of training at various OEMs
- Cost avoidance due to less travel and lower labor hours
- Increased shipment efficiency

## MTU

- Less travel and less training hours, for trainees and trainers. Less lost working hours for trainees
- Training done in supplier region, sometimes even in native language
- Reduced maintenance cost of different training systems for OEMs
- Standardization leads to better clarity in requirements

## GKN

- Provided a good, general overview of quality requirements
- Reduced cost associated with travel, training material and time
- Annual reduction in training hours for agents, internally and externally

[Sr. Supplier Quality Engineer Video](#)

# AS13002 & AS13003

**MARTIN SCHAEFFNER - MTU**

# AS13002 & AS13003 –How are the Standards being used?

## PCC

- For New Product Introduction
- Limited implementation

## MTU

- 13002 has limited use due to existence of already-approved quality plans
- 13003 is implemented within MTU for PPAP parts

## GKN

- 13002 has been implemented on GKN designs. This is a requirement at GKN sites, however still limited in use.
- 13003 Implementation on-going for new product introduction

# AS13002 & AS13003 - How are the Standards beneficial?

## PCC

- Standardized approach

## MTU

- MSA at MTU

## GKN

- Ease in training

## **MSA@MTU**

Experiences from using the Measurement System Analysis method at MTU

Martin Schäffner

10/03/2017

## Proprietary Notice

This document contains proprietary information of the MTU Aero Engines AG group companies. The document and its contents shall not be copied or disclosed to any third party or used for any purpose other than that for which it is provided, without the prior written agreement of MTU Aero Engines AG.

## General Approach

### What is the intent?

The goal is to make sure that every measurement system (gage + outside influences) used is suitable for the intended task → representing “real” part quality!

The AS13003 method summarizes different tools and delivers a standardized approach.

Mainly used in: *PPAP; approval of new measurement technology; stabilizing production processes*

### Guiding Questions

“Method 1” <i>Is the gage precise and accurate enough to rely on it?</i>		“Method 2” <i>What happens in real production line conditions?</i>	
How big is the variance of my measurement?	Calculation of the value $c_g > 1,33$	What happens if the same inspector measures the same part without knowing the results from his last measurements?	% GR&R Total Variance
Is there a systematic error in the measurement?	Calculation of the value $c_{gk} > 1,33$	What happens when a different inspector measures the same part without knowing the results from his coworker?	

## Hands-on Example

### Background

- Thin-walled part with tight tolerances
- The measurement results were suspected to be unstable due to issues with the fixture and clamps.

→ MSA performed according to AS13003

## Case, Turbine

### Approach

Definition of Key characteristics by manufacturing engineers, metrologists, and designers

Independent reference measurement (new program)

20 CMM measurements under production line conditions

Evaluation of systematic errors and variances.

Optimization of the measurement process to eliminate errors which were found until values can be accepted.

R&R Study to evaluate influences from different inspectors

## Actions defined due to results from the MSA

## Case, Turbine

- characteristics showed problems with accuracy and repeatability

→ a test on a more accurate CMM showed a huge improvement

- form tolerances problems with repeatability even though the machine was changed

→ The cause was found in changing the measuring fixture

- The parallelism tolerance between the upper and lower flange was still not in

→ Together with engineering the reference plane was changed

Standard CMM for this part family

New CMM

Rework of the measuring fixture

Change made to the drawing

## Lessons Learned up to now

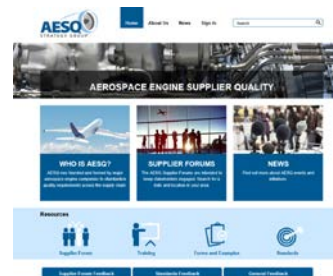

- By using the MSA method you get a reliable and understandable statement if you can rely on your results or not  
→ don't touch your production processes before you are sure about your measurement
- Cg & Cgk database is a great support to discuss drawing requirements with the design organization
- An MSA helps to eliminate influences coming from different measurement strategies
- A CMM measurement is not always reliable – accuracy and inspector variance matters
- High quality of existing measurement programs as in most cases only a few characteristics show a significant variance
- A comparison to an independent reference measurement gives a valuable insight into the production line measurement;  
→ not easy to achieve due to the small tolerances and the expectation to be more precise
- For tighter tolerances the method is very challenging and even a difference of  $1/10 \mu\text{m}$  between reference & production results can be the reason for an incapable system -> Rules for these special cases are necessary

# SUPPLIER CONTRIBUTIONS TO AESQ WORK

## How can suppliers contribute to the work of AESQ?

- Attend AESQ supplier forums
- Provide feedback on current and future standards through the website
- If you see a valuable need to standardize between AESQ members, please communicate
- Share experiences/case studies of best practices and impact of standards
- Claim your rights and privileges from the AS1300X standards vis-à-vis your customer. AESQ members are committed to deploy

How to give feedback

# OVERVIEW OF DRAFT STANDARDS

# Product Life Cycle & Document Interaction

## AS9145 (APQP/PPAP) & AESQ Standards

# AS13006 Process Control

## Original State

### Varying standards & approaches

- PC requirements not clearly defined/understood
- Inconsistent application/flowdown to sub-tiers
- Lack of commitment/belief in benefits
- Belief low volume environments not applicable

## Future State

**Common standard & approach  
Aligned with AS13002, 13003,  
13004, AS9103, AS9145 & AIAG  
“Blue Books”**

**In scope:** Process Control for all characteristics

**Out of scope:** Foundational requirements

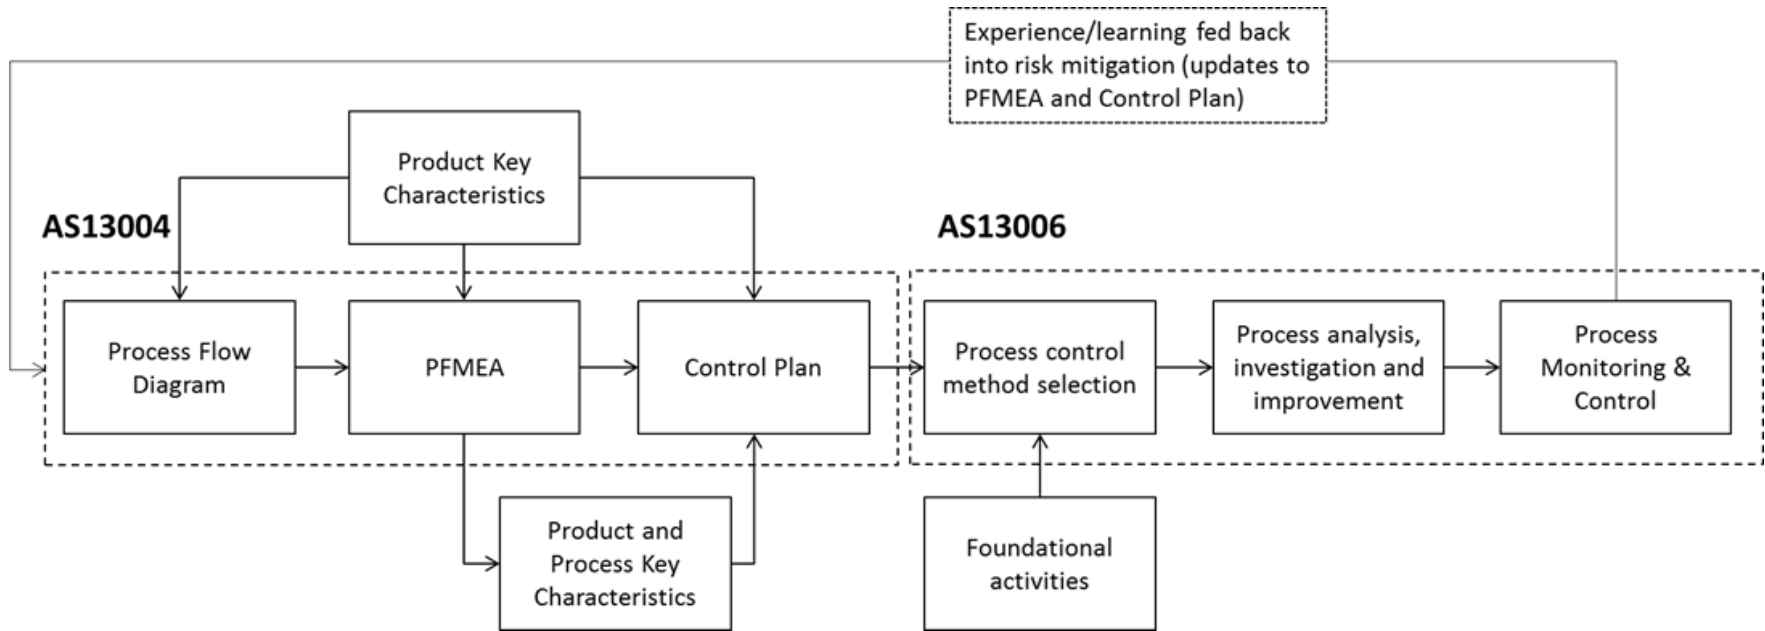

## AESQ Principles

- Standardise
- Simplify
- Adopts Existing Industry Standards
- Prescriptive, Auditable
- Common Language
- Supported by 3<sup>rd</sup> Party Training & Consultancy

## Expected Benefits

- Improved variation control & reduction techniques, broad-based belief in benefits
- Common prescriptive standard fully aligned with AESQ, AS9103 & AIAG Blue Book Stds
- Focus on accurate data analysis and prevention
- Improved Quality Performance, reduced risk
- Help will be on the website and not in the standard

# AS13006 Process Control – Valuable Content

- **Lots of sub-tier surprises?**
- **Is the variation and risk understood?**
- **Is the risk owned?**
- **Is it managed?**
- **Why and how will you improve it?**

# AS13007 Supplier Management

## Original State

## Varied Customer-Specific Requirements

## Future State

## Fewer Customer-Specific Requirements

**In scope:** Raw material & finished hardware  
**Out of scope:** Distributors & MRO suppliers

## AESQ Principles

- Standardise
- Simplify
- Adopts Existing Industry Standards
- Prescriptive, Auditable
- Common Language
- Supported by 3<sup>rd</sup> Party Training & Consultancy

## Expected Benefits

- Simplify language for organizations to manage suppliers
- Ability to use the standard throughout all tiers of the supply chain
- Standard will simplify and reduce the number of methods the suppliers must use to meet Customer requirements (i.e. simplify/make common the "how to")
- Better quality from sub-tiers

# AS13007 Supplier Management - Requirements

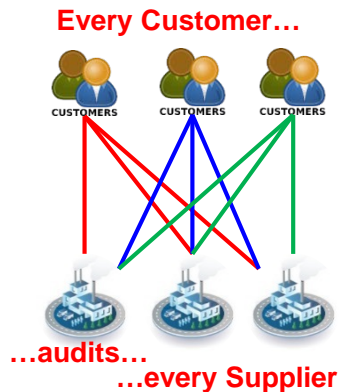

- 4.3 Quality System Requirements
- 4.5 Supplier Evaluation
- 4.6 Supplier Selection and Approval
- 4.7 Purchasing Requirements
- 4.8 Verification of Purchased Product
- 4.9 Control Of Suppliers
- 4.10 Supplier Performance Monitoring
- 4.11 Supplier Surveillance
- 4.13 Corrective and Preventive Action
- 4.14 Management of Nonconformance
- 4.15 Records

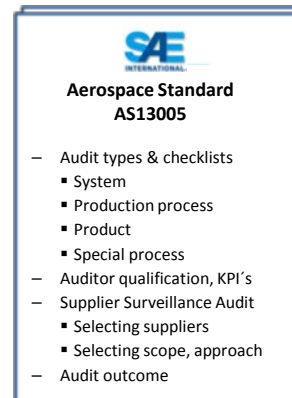

# AS13005 Internal & Supplier Surveillance Quality Audit Requirements

## Original State

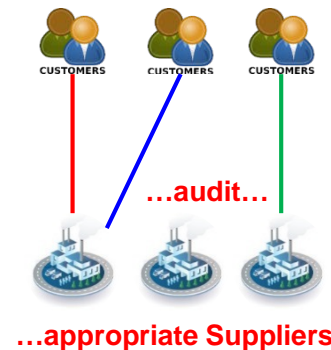

Internal audit requirements in many documents

## Future State

**Customers use standard audit process to...**

## AESQ Principles

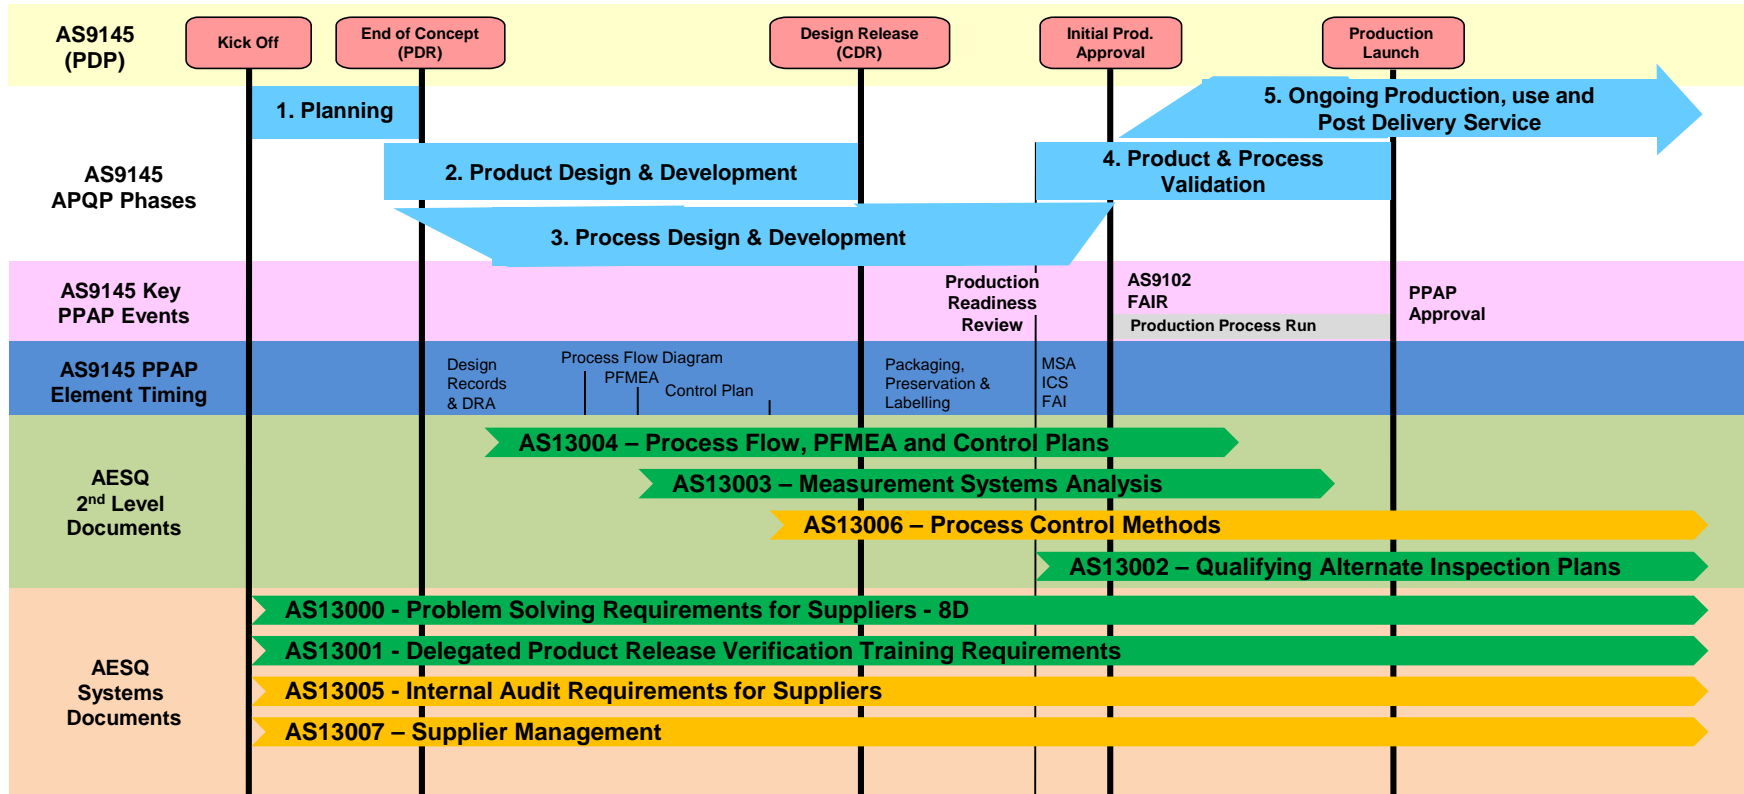

- Standardise
- Simplify
- Adopts Existing Industry Standards
- Prescriptive, Auditable
- Common Language
- Supported by 3<sup>rd</sup> Party Training & Consultancy

## Expected Benefits

- Lean & effective internal audit process provides confidence in state of compliance throughout Aero-Engine supply chain
- Improved rigor of audit approach
- Suppliers chosen for audit based on performance and risk
- Reduced and/or eliminated unnecessary and/or duplicate audits => Cost reduction / resources liberated by customer and supplier.
- Reduced supplier audits for performing suppliers (low risk) that demonstrate compliance to internal audit requirements
- Recognizes existing 3rd party certification

# Market Place Questions

Are there any additional questions, concerns, or feedback?

# BREAK & QUIZ

# QUIZ ANSWERS

1. What does AESQ stand for?
  - a.) Aeronautical Engine Source Quality
  - b.) Aerospace Engineering Supplier Quality
  - c.) Aerospace Engine Supplier Quality**
  - d.) Aeronautical Engineering Source Quality
  - e.) Aerospace Equipment Standards for Quality
2. Airworthiness regulations require safety be maintained for;
  - a.) The crew and passengers of manned aircraft
  - b.) Persons being overflown
  - c.) Property on the ground
  - d.) All of the above**
  - e.) a.) and b.) only
3. How can an organization request approval for an alternate inspection frequency plan as per AS13002?
  - a.) Request your quality contact to allow its use.
  - b.) Utilize the example form available at [aesq.saeitc.org](http://aesq.saeitc.org) to provide proof of capability and control.**
  - c.) Just change and see if the customer catches you.
  - d.) Perform capability studies and develop a strategy to reduce.
  - e.) None of the above

4. In general, what are the AS13000 requirements for timely problem solving response to customers?
- a.) D0 completed and returned to the customer within 2 days of problem identification.
  - b.) D5 completed and communicated to the customer within 30 days of problem identification.
  - c.) D8 closed and documentation sent to the customer within 60 days of problem identification.
  - d.) All of the above
  - e.) **a.) and c.) only**
5. In which following situation(s) should an MSA be performed/reevaluated when applying AS13003?
- a.) New/Changed Production Process.
  - b.) Product requirements are changed to be more restrictive or tightened.
  - c.) To verify a measurement system is adequate before SPC.
  - d.) Following a product escape related to (or suspected to be) from the Measurement System
  - e.) **All of the above.**
6. AS13004 should be applied to:
- a.) All New Product Introduction parts only
  - b.) Products and/or services currently in production only.
  - c.) **New Product Introduction and products currently in production when manufacturing processes are changed, transferred to a new location, or addressed for improvement.**
  - d.) Only when a customer makes a request.
  - e.) None of the above
7. If AS13001 is a customer requirement, where can DPRV personnel apply for training?
- a.) AESQ Website
  - b.) SAE Website
  - c.) **Probitas Authentication Website**
  - d.) Through their customer
  - e.) All of the above

# MARKET PLACE SUMMARY

# Marketplace Summary Session 1

Standard	Key Feedback	Facilitators
General	Will suppliers really see unique requirement elimination or will these standards drive additional work? How is AESQ applying this standard to tooling “non-product” supplier/products	
AS13000	Recommend consistent 8D training	Olivier Castets
AS13001	Inconsistency of customer expectations Missing commodities, engines and non flying parts	Earl Capozzi
AS13002	Partner with AS9100 Auditors Execute training deployment	Dave Goldberg
AS13003	Flow down as a reference in some cases, not clearly listed. Customers sometimes request MSA on all gauges, not practical, should be NPI KC or KC-M.	Dele Awofala Martin Schaeffner
AS13004	Still new	John Calder

# Marketplace Summary Session 2

Standard	Key Feedback	Facilitators
AS13005	Like to see a common audit approach	Jeremy Johnson Helen Djaknegren
AS13006	What is the clear business case to conduct it?	Peter Amsden
AS13007	Similarity to AS9100 – more definition Applicability to all components	Robert Czanik Thomas Schmitt
Future	First Article Integration Change Management Standardize concession Can AESQ website provide notifications upon new AESQ standards?	Catherine Catarina-Graca Bhu Kenjale

# CLOSING REMARKS

**“To establish and maintain a common set of Quality Requirements that enable the Global Aero Engine Supply Chain to be truly competitive through lean, capable processes and a culture of Continuous Improvement.”**

## **In detail:**

- create common standards within the engine manufacturers (OEM's) in regard to quality
- deploy together the written standards throughout our supply chain
- establish capable quality processes and a culture of continuous improvement

## **Main Targets:**

- to improve quality within the supply chain
- improve on time delivery and minimize costs through a reliable quality performance
- Gain efficiency by standardized processes

# Spread the word

# We mean it!
